

## Programming Languages and Platform Support

Logic Protect integrates with applications written in many different languages including: **Visual Basic 6, Visual C++, Borland C++, Delphi, C#, VB.NET** and others; running on platforms ranging from **Windows XP, 2000/2003/2008, Vista, Windows 7** and **Win 32bit, 64bit, .NET 1.1, 2.0, 3.5**.

## Software Activation

Logic Protect provides flexible, adjustable activation, protection and license management schemes including **Online, Phone and Offline (Behind-firewall and Corporate / Intranet environment)**.

## Offer Your Desktop Application as Subscription (SaaS)

Logic Protect is highly effective in real-time license management. You can create license schemes with limitations such as by the **number of days**, the **number of runs** or by **usage time**.

## Complete Software Protection

Watch your software being sold, not pirated! Complete protection against **disk cloning (eg. Norton Ghost), virtual machine cloning (eg. VMWare or Microsoft PC)** and **file tampering**.

## E-Commerce and Retail Support

Logic Protect **integrates with virtually any payment processor** via Web Services API and features built-in **PayPal support, retail distribution, serial number generation** and **custom licensing support**.

## Ultimate Control

With Logic Protect you decide how to protect and license your software! **Track concurrent users, enable or disable features, create floating licenses, lock or unlock users** and **showcase your software through built-in trial support**.

When you license Logic Protect there are **no royalty fees**, because we believe in **per developer licensing**, allowing you to **protect unlimited number of products** using our **hosted or in-house solutions**.
